**Appendix – Claims  
Marked to Show Changes**

12. (Once Amended) The method of claim 9 including ~~wherein the displaying includes~~ displaying an indication to add the user-defined group to a collection of items for later ordering.

13. (Once Amended) The method of claim 9 including ~~wherein the displaying includes~~ displaying to a user an indication to add the user-defined group to a collection of items for that user that is accessible to others, the collection for indicating to the others items in which that user has expressed an interest.

14. (Once Amended) The method of claim 9 including ~~wherein the displaying includes~~ displaying an indication of each of multiple procurement options having information related to ordering, wherein the indicated action that is to be performed to order the user-defined group is selection of one of the displayed procurement option indications, and wherein the sending of the request includes an indication to order the user-defined group using the information of the procurement option for the selected indication.

15. (Once Amended) The method of claim 9 wherein the displaying of the information identifies multiple user-defined groups each having multiple items, and including, before the sending to the server computer of the request to order a user-defined group of multiple items, receiving an indication of the user-defined group of multiple items to be ordered from a customer performing the ordering.

39. (Once Amended) A computer-readable medium whose contents cause a computer system to order multiple items defined by a user as a group, by performing the method of claim 9, comprising:

displaying information identifying a group of multiple items that was previously defined by a user, and displaying an indication of an action that is to be performed to order the user-defined group of multiple items; and

in response to the indicated action being performed, providing an indication to order the multiple items as a group.

42. (Once Amended) A computer-readable generated data signal transmitted via a transmission medium, the generated data signal having encoded contents that assist a first user of a computer system to order multiple items defined as a group by a second user, by performing a method comprising:

displaying information to the first user identifying a group of multiple items defined by the second user and displaying to the first user an indication of an action that is to be performed to order the user-defined group of multiple items; and

in response to the indicated action being performed, sending to a server computer ~~a request~~ an indication to order the user-defined group of multiple items.

45. (Once Amended) A client system for ordering multiple items defined by a user as a group, comprising:

means for displaying information identifying multiple items defined by a user as a group and displaying an indication of an action that is to be performed to order the user-defined group of multiple items; and

means for, in response to the indicated action being performed, sending to a server computer a request to order the user-defined group of multiple items.

60. (Once Amended) A computer-readable medium whose contents cause a computer system to process an order for a group of multiple items defined by a user, by performing the method of claim 46, comprising:

sending to a client system information identifying a group of multiple items that was previously defined by a user; and

after receiving an indication from the client system to order the identified user-defined group of multiple items, placing an order for the multiple items to be delivered as a group to a recipient.
